PERSONAL PROJECTS

Tasky Application

- This project is a simple task management web app built using HTML, CSS, and JavaScript**.** It allows users to create, read, update, and delete (CRUD) tasks in a visually appealing interface. The app uses localStorage to persist tasks between sessions without a backend. Designed with a responsive layout and dynamic DOM manipulation for real-time updates.

QR-Generator Master

- QR Generator Master is a web application developed using HTML, CSS, and JavaScript to generate QR codes from user input instantly. It integrates with a QR code API to dynamically create scannable codes for text, URLs, or contact info. The UI is clean, responsive, and user-friendly for seamless interaction. It includes features like downloadable QR codes and real-time validation.

Netflix-clone Master

- **This project** is a basic front-end project built using React.js to mimic the layout of Netflix. It features a static homepage with movie thumbnails, banners, and navigation using React components. The design focuses on UI replication with styled sections and responsive layout. Ideal for demonstrating understanding of React basics and component structure**.**

SKILLS

HTML 5   CSS   Bootstrap   Javascript
React JS   Java   Node.js
MS Word

CERTIFICATES
